SUMMARY

Cloud Solution Architect and Engineer with a strong background in AWS transformation, application developments and AI/ML integration. A team player and problem solver with a target-oriented approach and high work standards, skilled in collaborating with stakeholder to drive cloud adoption and optimise processes.

WORK EXPERIENCE

- Senior Vice President, Cloud Solution Architect & Engineer** | JPMorgan Chase & Co. Hong Kong 08/2020 – Present
- Designed and implemented an **Agentic AI** solution for a firm-wide product intake tool to streamline processes and enhance user experience .
 - Developed a ml pipeline using AWS **Sagemaker**, Led a Cloud Migration Planning project on using **LLM and Agentic AI with OpenAI**.
 - Led AWS **Cloud transformation initiatives**, enabling migration from on-premises or private cloud to public cloud. Provided on-site and online support across regions, focusing on re-architecting, re-hosting or other strategies tailored to business requirements.
 - Developed AWS **Cloud Adoption blueprints, Migration Playbooks and Runbooks** to standardise and streamline cloud adoption processes. Engaged with stakeholders to define success metrics and ensure alignment with business objectives.
 - Collaborated with stakeholders to develop decision-making tools, including a tool for selecting optimal cloud service and cloud migration readiness validator tool, aiding the application developer community in cloud adoption, Tech stack: **Java, React Typescript, Python**.
 - Led global **AWS** and **CKAD** Study groups, certifying engineers, engaging over 2000+ participants globally and around **18%** got certified.
- Lead Engineer** | American Express Hong Kong 12/2018 – 08/2020
- Design and build **React Native** mobile application for India market, and host backend services in **RedHat** private cloud platform, integrated dynamic security scan, loading test, performance test, and Android security framework into the application.
 - Lead multiple legacy **applications migration**. Work with business/engineering team to migrate mainframe application to cloud platform
 - Lead multiple global initiatives **CI/CD(Jenkins, SonarQube, JMeter, XRelease), Arena(Production integration Test Framework) & TCAI(Infrastructure cost)** in APAC region. Work closely with application team and track the progress.
 - Recognised as **OUTSTANDING Employee** in 2019
- Senior Software Engineer** | TinkLabs Hong Kong 11/2017 – 12/2018
- Revamp backend service to **microservice architecture** using **Containerization, AWS ECS Fargate, NodeJS**, new **CICD pipeline**
 - Decouple backend system using **Redis** message queue, and **Lambda** serverless technology
 - Created AB testing using **Optimizely** for client side, and collect data about the impact of changes
 - Built Data Lake in S3 using AWS **Athena, Redshift Spectrum, AWS Glue**, ETL job, and store file as **Parquet** by Snappy compression method. And using **QuickSight** to build visualizations, perform ad-hoc analysis
 - Built **IOT** system using AWS IOT service
- Analyst Programmer** | Champion Technology Holdings Limited Hong Kong 09/2014 – 11/2017
- Designed and built e-commerce application which is compatible with Android, IOS and desktop device with PHP, JS, jQuery, Java, Swift 3
 - Prepared function specifications according to client's requirements. design, implementation, testing and deployment the system
- Software/Networking Engineer** | Shandong TV ShanDong, China 12/2011 – 05/2013
- Designed Fixed assets management system and TV recording schedule system, using Java, PASCAL, Web-sphere, MySQL.
- Software Engineer** | LiQun co., LTD Headquarter ShanDong, China 07/2010 – 12/2011
- Built website and desktop applications for various departments using Java, JSP, Pascal, HTML and, SQL server, DB2 and Informix database.

CERTIFICATES

- 08/2025 **AWS Certified Machine Learning Engineer - Associate** – awarded by AWS
- 01/2025 **Azure AI Engineer Associate** – awarded by Microsoft
- 08/2023 **AWS Certified Advanced Networking - Specialty** – awarded by AWS
- 12/2022 **AWS Certified Database - Specialty** – awarded by AWS
- 07/2022 **AWS Certified Security - Specialty** – awarded by AWS
- 03/2022 **AWS Solutions Architect – Professional** awarded by AWS
- 01/2022. **HashiCorp Certified: Terraform Associate** awarded by HashiCorp
- 08/2021. **Certified Kubernetes Application Developer** awarded by Linux Foundation
- 10/2019 **AWS Solutions Architect – Associate** awarded by AWS
- 08/2017 **PMP (Project Management Professional)** awarded by PMI.
- 11/2011 **CCNA (Cisco Certified Network Associate)** awarded by Cisco System, Inc.

SKILLS

Cloud Technology: AWS, Azure, Terraform, Jenkins, Spinnaker, Kubernetes,
Programming Languages: Java, Python, JavaScript (NodeJS & React), PHP, Swift, HTML, CSS, Pascal
Database: AWS Aurora, RDS, DynamoDB, MongoDB, MySQL, SQL Server, DB2, IBM Informix
Management: Problem-solving, Coach for Impact, Drive Performance, Foster Feedback.

SELECTED PROJECTS

- Public Cloud Decision Tree (2024 - now)**
- Decision Tree is an important tool for JPMorgan in the quest to adopt Public Cloud
 - The tool helps the Application Developer community to make informed decision on which service to select via a criteria driven heat map
 - Hosting on AWS ECS Fargate. Tech Stack: Java, React Javascript. All Time Unique User: **7700+**
- Cloud Migration Readiness Validator (2025)**
- Validate if you application is ready to migrate to cloud, helping application team to make a decision on cloud migration planing.
 - Hosting on AWS ECS Fargate, integrating with other AWS services such as **Event-bridge, Step-function, Athena, Glue, S3, QlikSense**.
- Data Processing Pipeline on AWS cloud (2019)**
- Migrate current CSV data to new format - Parquet and compress files using Snappy. Save **84.97%** spaces on S3 (1.3TB -> 200GB)
 - Build data processing pipeline on AWS using **SQS, Lambda, and AWS Glue**. Automatic convert data to Parquet on the air and store on **S3** and run **Glue crawler** to periodically to scan the data to do data partitioning job.
 - Using **Amazon Athena** to query against Data stored on S3 directly and integrate **QuickSight** to build visualization analysis.
- Handy backend infrastructure revamp (2019)**
- Decouple backend system to multiple micro-services using **NodeJS, GoLang, AWS aurora DB** and design Restful APIs
 - Write Wifi-hotspot and Notification micro-services using **NodeJS/Express** and using **AWS X-Ray** to track down and monitor requests
 - Communication between services using **Redis queue** and **Event-bus**, push notification using PUSHY services.
- ChangeFit - Machine learning application deployed on AWS (2023)**
- Predict likelihood of production incident contributed by software releases
 - Jupiter Notebook** to train the model and serve the endpoint by **AWS SageMaker**, using Java and Python -
- Handy SmartDock D2 - IoT System (2018)**
- Built IoT Certificate Vending Machine on AWS using **Lambda, API Gateway, DynamoDB, IOT** Services to allows the device to apply for their own certificate and installation
 - Using IoT Thing's shadow to store and update Device configuration, Communicate over **MQTT** protocol

EDUCATION

THE UNIVERSITY OF HONG KONG	Master's Degree: Computer Science (Distinction, Top 5%)	09/2013 – 09/2014
JINAN UNIVERSITY	Bachelor's Degree: Network Engineering	09/2006 – 07/2010
